Legal Website Implementation Guide

DOCUMENT DT-REPORT-002 · LAST UPDATED AUGUST 15, 2026

STATUS
ATTORNEY REVIEW DRAFT

PUBLICATION / USE
NOT FOR CONSUMER PUBLICATION

1. Implementation principles

The legal system should be implemented as versioned, accessible HTML first, with the branded PDFs available as print/download references. The website must not convert an attorney-review or conditional document into an operative promise merely because the file exists.

Every release should use a central legal-document registry and a central business-rules source of truth. Repeated values such as shipping threshold, return window, cancellation fee and membership cadence must not be copied into multiple components as independent literals.

P0-dependent features should fail closed. If required terms, credentials, consent versions or processors are missing, the user may view information or join a nontransactional interest list, but must not be allowed to pay, book or submit sensitive intake through an incomplete flow.

2. Recommended routes and publication states

Document	Route	Initial state
Privacy Policy	/privacy	Publish after operator/contact/vendor/retention minimums are approved
Terms of Use & Sale	/terms	Publish before checkout
Shipping & Delivery	/shipping	Publish before checkout after fulfillment timing verified
Returns, Refunds & Exchanges	/returns	Publish before checkout after commercial rules approved
Booking/Cancellation/No-Show	/booking-policy	Publish before paid booking after fee windows approved
Aesthetic Disclaimer	/aesthetic-disclaimer	Publish with service pages after scope verified
Virtual Consultation Terms	/virtual-consultation-terms	Publish before virtual intake/payment

Document	Route	Initial state
Photo & Intake Authorization	/photo-intake-authorization	Present contextually in intake/consent flow
Consumer Health Data	/consumer-health-data	Conditional; activate only when coverage/processing trigger is met
Minor/Guardian Consent	/minor-consent	Contextual; activate only after state age/scope rules approved
Treatment Informed Consent	/treatment-consent	Contextual before applicable treatment
Membership Terms	/membership-terms	Pre-launch only; activate with paid membership
Cookie & Tracking Notice	/cookies	Publish after production tracker inventory
Accessibility Statement	/accessibility	Publish after support channel and basic QA

Each route should display status/effective date in source metadata but should not expose “ATTORNEY REVIEW DRAFT” to ordinary consumers once counsel approves an operative version. Draft files may remain in the attorney package while website production points only to an approved/published revision.

3. Global footer

Add persistent, accessible links to the currently applicable legal pages:

- Terms
- Privacy
- Shipping
- Returns
- Booking / Cancellation
- Aesthetic Disclaimer
- Accessibility
- Cookies
- Consumer Health Data **only when the applicable health-data flow is active**

Do not expose the pre-launch Membership Terms as though membership is for sale. A “Membership” marketing page may collect interest only under the general Privacy Policy until the paid program is finalized.

Footer links must be keyboard accessible, have descriptive text and remain visible on mobile without hidden horizontal scrolling.

4. Product pages

Required changes

- Remove/rewrite PO drug-like claims identified in the Claims Audit before sale.
- Use a canonical SKU record for current price, size, availability, manufacturer/brand, directions, warnings and claim copy.
- For sunscreen, preserve current manufacturer/FDA-required drug labeling and warnings.
- Do not imply Dew Theory manufactures Skin Script products unless true.

- Link Shipping and Returns near the purchase CTA or cart rather than relying only on the footer.

Claim metadata

Recommended internal fields: `claim_id`, `sku`, `claim_text`, `claim_category`, `substantiation_ref`, `manufacturer_source`, `approved_by`, `approved_at`, `status`, `content_version`.

Block deployment of a P0-flagged claim unless status is approved and the substantiation reference exists.

5. Cart and checkout

Policy links

Cart should show concise links to Shipping and Returns. Checkout should link Terms, Shipping, Returns and Privacy.

Order assent

Immediately before the final "Place order" action, use:

By placing this order, I agree to Dew Theory's Terms of Use & Sale and acknowledge the Shipping & Delivery Policy and Returns, Refunds & Exchanges Policy.

Terms link should open or be otherwise readily accessible without losing entered order data. Do not pre-check an unrelated marketing box.

Payment and order records

Store, at minimum:

- order ID;
- customer/account ID where available;
- items and canonical SKU/version;
- displayed prices, discount and shipping/tax basis;
- Terms version/hash;
- Shipping Policy version/hash;
- Returns Policy version/hash;
- final checkout timestamp in UTC;
- relevant checkbox/assent state if used;
- payment-provider transaction identifier, not full card data;
- shipping-address version used for fulfillment; and
- order status/change history.

Fail-closed checks

Disable final charge if any of these are missing in the production legal/business registry: merchant/operator identity, production payment configuration, published Terms, published Returns policy, shipment-time rule and final SKU price.

6. Shipping and fulfillment

Implement canonical configuration for:

- free-shipping threshold \$49 and current \$7 below-threshold rate only if business re-approves those current site values;
- threshold basis (currently stated as pre-discount product subtotal);
- supported destinations;
- ship-from/fulfillment provider by SKU;
- processing/shipping estimates;
- carrier/tracking capability;
- out-of-stock/backorder handling; and
- delay-consent/cancellation/refund workflow.

Do not hard-code shipping claims into static page copy if fulfillment configuration can contradict them. Add automated tests asserting policy copy matches production shipping rules.

7. Returns workflow

Before enabling checkout, replace all return markers with approved business terms. The returns system should support reason codes at least for discretionary return, damaged in transit, incorrect item, defect, adverse reaction/safety concern and order cancellation.

Store request timestamp, order/line item, policy version, authorization decision, return tracking where applicable, received/inspection date, refund transaction and reason. Safety complaints should be escalated separately from ordinary preference returns.

8. Booking flow

Publication gate

Do not accept a paid booking until the service/provider/facility scope matrix and real production calendar are verified.

Required disclosures adjacent to booking

Display final service name, duration, price, deposit, cancellation deadline, late-cancellation/no-show charge and lateness rule before confirmation.

Booking assent

Use:

I have read and agree to the Booking, Cancellation & No-Show Policy and acknowledge the Aesthetic Services & Skincare Disclaimer. I understand that treatment is subject to provider screening, lawful scope of practice and any required treatment consent.

Stored evidence

Store appointment ID, service version, provider, start time/time zone, price, deposit authorization, cancellation deadline, booking-policy version/hash, assent timestamp, reminders, cancellations/reschedules and fee events.

9. Treatment consent

Before an applicable in-person treatment, present the current Treatment Informed Consent with only sections relevant to the selected service. The exact peel product/strength and other procedure-specific details should be captured when applicable.

Do not treat a website Terms checkbox as informed consent for a chemical peel or dermaplaning. Store signed/electronic consent version/hash and provider identity with the appointment record.

10. Virtual consultation

Separate consent layers

Replace the current bundled checkbox with separate controls.

Required service terms:

I have read and agree to the Dew Theory Virtual Consultation Terms & Informed Consent and Booking, Cancellation & No-Show Policy, and I acknowledge the Aesthetic Services & Skincare Disclaimer. I understand this is aesthetic skincare guidance, not medical diagnosis or treatment.

Required service-use intake/photo authorization:

I authorize Dew Theory to collect and use the intake information and service-use photographs I submit to prepare for and provide my consultation, as described in the Privacy Policy and Consultation Photo & Intake Authorization.

Conditional consumer-health-data consent: present separately only when required by the consumer's jurisdiction/data flow, with the required statutory disclosures.

Optional marketing/publicity: separate unchecked choices; never a condition of service.

Sensitive upload controls

- Keep images private by default.
 - Use signed/tokenized access with short-lived URLs where applicable.
 - Do not place raw private-image URLs into analytics.
 - Disable advertising/retargeting scripts on intake and photo routes.
 - Log administrative access where proportionate.
 - Provide deletion/retention workflow.
-

11. Minor flows

Add age screening before service booking and sensitive intake. Do not knowingly collect under-13 personal information through an ordinary form unless the COPPA analysis and verifiable-parental-consent mechanism are approved.

For minors eligible for services under the actual operating state's law:

- capture minor date of birth;
 - capture guardian legal name and authority;
 - show only treatments allowed for that age/credential;
 - require guardian consent/presence where applicable;
 - keep optional minor marketing photography separate; and
 - retain guardian assent evidence.
-

12. Privacy rights and consumer health data

Create a privacy request endpoint or monitored channel supporting, as applicable, access/confirmation, correction, deletion, portability, opt-out, health-data consent withdrawal and appeal.

Request system should store request ID, jurisdiction claimed, authenticated identity, request type, received date, statutory due date, extensions, systems searched, processors contacted, response, appeal and closure date. Avoid collecting more verification data than reasonably necessary.

For consumer health data, implement downstream deletion/processor instructions where required and preserve an auditable record that does not itself retain the deleted substantive content unnecessarily.

13. Cookies, analytics and tracking

Create an automated or reviewed tracker inventory before each significant release. Default block advertising tags on /virtual-consultation, intake, photo-upload, treatment-consent, minor-consent and privacy/health-data request surfaces.

If nonessential tracking is introduced where consent is required, do not load it until the user has made the required choice. Provide preferences later and support GPC for covered sale/share/targeted-advertising processing when applicable.

14. Email and marketing

Transactional emails should include only order/service communications unless marketing consent/lawful basis permits more. Promotional email should include accurate sender identity, compliant physical postal address once verified and a functioning unsubscribe mechanism. Suppression should be global enough to prevent accidental re-addition without a new valid request.

15. Membership

Do not accept paid membership enrollment until:

- price/cadence/benefits are final;
- cancellation method is operational;
- applicable state automatic-renewal rules are mapped;
- recurring assent text contains actual price and cadence;
- durable enrollment confirmation is implemented; and
- cancellation confirmation/renewal notice logic is tested.

Store the exact offer and recurring-consent version presented at enrollment.

16. Accessibility implementation

At minimum test:

- semantic landmarks/headings;
- keyboard navigation and visible focus;
- form labels/errors/instructions;
- color contrast using the approved black/white palette;
- alt text for informative product/service imagery;
- modal/dialog focus management;
- error recovery in checkout/booking;
- zoom/reflow at common mobile widths;
- downloadable PDF link naming; and
- legal page readability and link purpose.

Provide an alternate support method for users blocked by a third-party integration.

17. Legal document registry

Recommended schema:

document_id
slug
title

```
status
semantic_version
effective_at
published_at
sha256
content_path
pdf_asset_path
requires_assent
supersedes_version
jurisdiction_scope
```

Only status published (or an equivalent explicit production state) may be referenced by transactional flows. Draft/conditional/pre-launch documents must not be silently promoted.

18. Consent/assent event schema

Recommended fields:

```
event_id
document_id
document_version
document_sha256
consent_type
user_or_customer_id
order_id_or_appointment_id
checkbox_state
signed_name_or_signature_reference
timestamp_utc
ip_or_ip_hash_if_legally_justified
user_agent_or_device_evidence_if_justified
jurisdiction_basis_if_relevant
withdrawn_at
superseding_event_id
```

Technical evidence should be proportionate. Do not collect invasive fingerprinting merely to prove assent.

19. Version hashing

Normalize the production HTML/Markdown source deterministically and calculate SHA-256 at publication. Store that hash with every material assent. Keep a read-only archive of superseded versions so Dew Theory can reconstruct what a consumer saw.

20. Sitemap and metadata

Add published legal routes to the XML sitemap where appropriate. Use descriptive titles and canonical URLs. Do not index contextual signed consent pages that expose client-specific identifiers. Conditional or pre-launch drafts should be noindex and inaccessible from consumer transaction flows until activated.

21. Automated tests and release gates

Add tests for:

- no checkout without required published policy versions;
- \$49/\$7 shipping logic matches copy if retained;
- no active DEW15 placeholder in production;
- no mock booking provider in production transaction path;
- required virtual-consent boxes are separate and default false;
- optional marketing boxes default false;
- health-data gating by configured jurisdiction/feature flag;
- minor age gate and prohibited-service filtering;
- consent version/hash persistence;
- no ad trackers on sensitive routes;
- cancellation/no-show fee equals the disclosed value;
- membership recurring charge equals the consented price/cadence;
- sitemap/footer route integrity; and
- accessibility smoke checks for forms and keyboard use.

22. Deployment sequence

1. Resolve P0 Open Items and obtain counsel-approved publication copy.
2. Insert verified business facts into the canonical business-rules registry and legal sources.
3. Produce a new semantic version and hash for each approved document.
4. Deploy legal HTML pages first; verify content, metadata and accessibility.
5. Enable footer/legal navigation.
6. Enable commerce only after checkout/returns/shipping/payment tests pass.
7. Enable services only after licensing/scope, real booking, fee terms and treatment consents pass.
8. Enable virtual intake only after privacy/health-data/photo consent, storage and deletion tests pass.
9. Enable membership only through a separate approved release.
10. Verify dewtheoryco.com live after deployment and capture commit, build, deployment and smoke-test evidence.

23. Publication checklist

Before each transactional launch, confirm there are no unresolved TBD, TODO, INSERT, PLACEHOLDER, TO CONFIRM or BUSINESS DECISION REQUIRED markers in the specific policies used by that flow. A marker may remain in the attorney package, but not in a production policy presented as complete.
